IoT Enabled Smart Reliable Medicine Delivery System

- **Tech Stack:** Arduino, Sensors, Embedded C, IoT, Basic Communication Modules

Description: Developed an IoT-based system for secure and reliable medicine delivery. Implemented real-time monitoring using sensors to track environmental conditions such as temperature and location. Ensured safe delivery through authentication mechanisms (OTP/RFID-based access). Enabled automated alerts and notifications for delivery status, improving efficiency, reducing manual errors, and maintaining the quality of sensitive medicines.

Certifications

- **VLSI Intern - SkillDzire**

Strengthened analytical and problem-solving skills while working on digital logic design and testing workflows. Improved ability to learn and adapt to new technical concepts quickly, a skill valuable in software development.

- **Embedded System and IOT - APSCHE-IIDT**

Embedded systems are specialized computing systems that perform dedicated functions or tasks within larger systems. The Internet of Things (IoT) refers to the interconnected network of physical devices, vehicles, buildings.
